Choose your device to help you setup.

Router:

- Connect to your wireless network.
- Using your browser, log in to the router's gateway IP address*.
- Search for the **DNS** settings and save your current addresses as a backup.
- Replace those addresses with the **Sarks provided** DNS address
- Save your settings.
- That's it! Your whole network now can navigate an ad-free and secure Internet.

Windows:

- Click on the Start menu, then click on **Control Panel**.
- Click on **Network and Internet**.
- Click on **Change Adapter Settings**.
- Right-click on the Ethernet or Wi-Fi network you are connected to, then click **Properties**.
- Right-click **Internet Protocol Version 4** and click **Properties**.
- Click **Use The Following DNS Server Addresses**.
- Save your current DNS addresses as a backup.
- Replace those addresses with the **Sarks provided** DNS address.
- Click **OK**, then **Close**.
- That's it! Your device now can navigate an ad-free and secure Internet.

Linux(Ubuntu):

Most Linux distributions configure DNS settings through the Network Manager.

- Click the Applications icon on the left menu bar.
- Click **Settings**, then **Network**.
- Find your internet connection on the right pane, then click the gear icon.
- Click the **IPv4** or **IPv6** tab to view your DNS settings.
- Set the "Automatic" toggle on the DNS entry to **Off**.
- Add **Sarks provided** DNS address.
- Click **Apply**.
- That's it! Your device now can navigate an ad-free and secure Internet.

Linux(Generic/terminal):

- **Sudo** access the terminal.
- using your editor edit **/etc/resolv.conf**
- Add **Sarks provided** DNS address.
- **Save** and exit from the editor.
- That's it! Your device now can navigate an ad-free and secure Internet.

MacOS:

- Open System Preferences.
- Search and select **DNS Servers**.
- Click the + button to add a DNS Server and enter **Sarks provided DNS**
- Click **Ok** and then **Apply**.
- That's it! Your device now can navigate an ad-free and secure Internet.
